

SMART SLED

POWERED BY:

The BodyKore Smart Sled was created to take athletes to a whole new level of training. With its advanced technology and futuristic look, one coach has already dubbed it the “Tesla of Fitness.” Here are some highlights of this dynamic training tool.

The BodyKore Smart Sled provides performance feedback in real time. Athletes and coaches can monitor progress, track stats and make necessary adjustments to reach goals.

KEY FEATURES

DIGITIZED RESISTANCE

Convenience is king. The BodyKore Smart Sled uses digitized resistance (dual magnetic motors) to adjust workout intensity with 3x more resistance than any other sled on the market (without any weights).

MULTI-PLANAR MOVEMENTS

Other sleds move in one direction. Not this one. Each wheel can be adjusted to its own resistance to allow athletes to train at a more competitive level. Other sleds move in one direction. Not this one. Each wheel can be adjusted to its own resistance to allow athletes to train at a more competitive level.

LIVE DATA FEEDBACK

Unlike other sleds, the BodyKore Smart Sled provides performance feedback in real time. Athletes and coaches can monitor progress, track stats and make necessary adjustments to reach goals.

APP CONTROLLED

The BodyKore Smart Sled is controlled through a proprietary app using the Bluetooth feature to digitally reduce or intensify resistance during a workout. This makes training far more convenient, faster and efficient (especially when training in pairs).

SMART SLED

POWERED BY:

Caster Wheels
360 Degree rotation for multi-planar movements

Removeable Handles
For easy storage

Ergonomic Handles
5 point handle grips

Dual Weight Pegs
For up to 1000lbs Additional Resistance

All Terrain Tires with High Quality Alloy Wheels

Futuristic Design

Permanent Magnetic Digital Resistant Motors

Tow Hook
For pulling and harness workouts.
